

SLE201

SUSE Linux Enterprise Server Administration

Description:

This five day course is designed for those who have little or no experience with Linux and who are seeking a fundamental understanding of the SUSE Linux Enterprise operating system. It is also ideal for those who want to begin preparing for the SUSE Certified Administrator (SCA) in Enterprise Linux (2017 Update) certification exam.

Students will be able to:

- Install SLES and perform basic Linux configuration
- Become familiar with the command line interface & commonly used commands
- Configure and use Remote Administration
- Manage the boot process and understand systemd
- Manage processes and jobs
- Manage users and permissions
- Manage software
- Configure basic networking
- Manage storage
- Monitoring SUSE Linux Enterprise

Course requirements:

- This course is designed for students without previous Linux experience. Basic computer skills on any operating system is required.

This course is intended for:

This course is designed for those who have little or no experience with Linux and who are seeking a fundamental understanding of the SUSE Linux Enterprise operating system. It is also ideal for those who want to begin preparing for the SUSE Certified Administrator (SCA) in Enterprise Linux (2017 Update) certification exam.

Literature:

All participants will get original SUSE Linux materials.

Hardware:

Classrooms are equipped with high-performance computers with Internet access and the possibility of wireless connection.

Syllabus:

Chapter 1: What is SUSE Linux Enterprise?

- Understand the different Flavors of SUSE Linux
- Understand the SLE Maintenance Model
- Install SLES
